Ring measurement sheet

Print at 100% / "Actual size" on A4 paper. Do not use "Fit to page".

Print check

With a ruler, this line must measure exactly 100 mm (tick at 50 mm). If it does not, the scale is wrong: reprint at 100% before taking any photo.

How to take the photo

1. Put this sheet on a flat table in soft, even light. No flash, no hard shadows.
2. Lay one ring flat inside the corner marks, so white paper shows through it.
3. Hold the phone flat, directly above the ring, about 20-30 cm away.
4. Fit the large corner marks in the frame. Marker and ring must both be fully visible.
5. Tap the marker to focus, hold still, take the photo, then upload it.

Supported: one ring, near-overhead photo (up to about 10 degrees of tilt), sharp focus, plain white paper. The app asks for a retake rather than guess when these are not met.
